

## Molecular and Cell Biology of the Plant Cell Cycle

Filesize: 6.29 MB

### ***Reviews***

*This kind of publication is every thing and got me to searching in advance and much more. It really is simplistic but surprises within the 50 percent from the ebook. I am easily could get a satisfaction of studying a composed publication.*

To get **Molecular and Cell Biology of the Plant Cell Cycle** PDF, remember to access the button below and download the ebook or gain access to additional information which are have conjunction with MOLECULAR AND CELL BIOLOGY OF THE PLANT CELL CYCLE ebook.

Book Condition: New. Publisher/Verlag: Springer Netherlands | Proceedings of a meeting held at Lancaster University, 9-10th April, 1992 | Proceedings of a meeting held at Lancaster University April 9-10th, 1992 | Considerable advances have been made in our understanding of the eukaryotic cell cycle at the molecular level over the past two decades or so, particularly in yeast and in animal systems. However, only in the past three or four years has progress been made in plants at the molecular level. The present volume brings together molecular biologists, cell biologists and physiologists to discuss this recent progress and how it relates to our understanding of the regulation of plant growth and development. The opening paper summarises the progress which has been made with fission yeast. Subsequent papers explore what is known about cell cycle control at the molecular level in plants, and about cell cycle regulation in specific physiological systems, ending with summary papers on cell division in roots and shoots. The book comprises up-to-date findings on a fundamental aspect of plant growth and development, and as such will be of particular interest to advanced undergraduates, postgraduates and research scientists in the fields of molecular biology, cell biology and physiology. | 1. The controls acting at mitosis in *Schizosaccharomyces pombe*.- 2. A p34cdc2-based cell cycle: its significance in monocotyledonous, dicotyledonous and unicellular plants.- 3. Isolation of Arabidopsis homologues to yeast cell cycle genes.- 4. The molecular genetics and biochemistry of DNA replication.- 5. Control of initiation of DNA replication in plants.- 6. Nuclear proteins and the release from quiescence of root meristematic cells in *Pisum sativum*.- 7. Histone H2A expression during S-phase: histological colocalisation of H2A mRNA and DNA synthesis in pea root tips.- 8. Molecular characterisation of cell populations in the maize root apex.- 9. Key components of cell cycle control...
