

Global Research in Nuclear Reactor Technology (Hardback)

By -

Clanrye International, United States, 2015. Hardback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.This book aims to explain the latest research and technological advances in the field of nuclear reactors. The main topics covered in the book include thermal stratification in PWR piping setup, isothermal based phase transformation leading to manifestation of nuclear fuel, latest procedures to calculate nuclear temperature using Doppler broadening function calculation, Monte Carlo burnup simulation of concentrated gadolinium burnable poison for PWR fuel, study of fuel alloy of uranium-molybdenum, and safety assessment of research reactors. The book also enlightens the reader about thermal hydraulics study for ultra-high temperature reactor with packed sphere fuels, the advantages of using lead-208 for high temperature reactor coolant for fast reactors and acceleration driven systems, the scope of nuclear power as electricity production with reference to Generation III and IV reactors, nanostructural materials and shaped solids for greater energy efficiency towards nuclear reactor safety, waste disposal, and multilateral nuclear approach to fuel cycles. The book also gives a descriptive analysis of the Fukushima nuclear accident.

Reviews

This written publication is wonderful. It really is loaded with knowledge and wisdom You will not really feel monotony at at any time of your time (that's what catalogues are for relating to if you ask me).

-- **Desmond Becker**

Absolutely essential go through publication. I am quite late in start reading this one, but better then never. You will not feel monotony at at any time of the time (that's what catalogues are for regarding if you ask me).

-- **Ambrose Thompson II**
