Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 Excerpt: . to the flume until it was found by trial that the water flowed in lines practically parallel to the sides of the flume. DESCRIPTION OF BULKHEAD AND SUBMERGED TUBES The bulkhead containing the submerged tube was located about twenty-four feet from the entrance of the ten foot channel, the arrangement being shown in detail on Plates I and II. The planks near the bottom of the bulkhead containing the submerged tube were four and three-quarters inches thick in order to give the required strength, while those at or near the top were three and three-quarters inches, thick. In order to have a uniform thickness of three and three-quarters inches at the entrance to the tube, it was necessary to diminish the thickness of the four and three-quarters inch planks around the entrance to the tube. A thickness of one inch and width of seven and one-half inches, was therefore, cut from the up stream side of the thicker planks, around the entrance to the tube. The distance seven and one-half inches was arbitrary, and judged sufficient to prevent any influence of the one inch shoulder on the flow of water through the tube. The bulkhead was thoroughly caulked and tested for leakage previous and subsequent to the making of the experiments with the submerged tubes. The plan followed was to study the simple forms of submerged tubes, four feet square with entrance having square comers, and of lengths varying from thirty-one hundredths feet to fourteen...
