Brand New Book ***** Print on Demand *****.Excerpt from Ecology and Resource Development in Southeast Asia Ecology and environment have become emotionally charged slogans in recent years. Public alarm in industrialized countries about environmental quality has led to the emergence of a new social movement, with suitable villains, heroes, and crusades. These heretofore staid technical concepts have become ambiguous and, in some quarters at least, almost fighting words. Our usage is more mundane. Ecology, as a quantitative science, is relatively youthful. As a collection of knowledge, however, it is as old as man's curiosity about his environment. The environment of any organism is the collection of other organisms and chemical and physical elements with which the organism interacts. An ecosystem is any relatively self-contained system of organisms and their environment. Ecology is the study of ecosystems: their structure, functioning, and changes. Ecologists explore interactions between organisms and their environments. Any natural regime of soil, water, atmosphere, and light has some maximum amount of living material, or biomass, that it can support. If left undisturbed, biotic communities evolve toward successively more complex patterns of organization that increase the biomass. Those species better able to utilize site resources gradually replace those less efficient. Natural ecosystems can stabilize themselves in response to external disruptions.
